

# EverReal QA challenge

Please follow the requirements below and try to submit a result in maximum 7 days.

## Manual testing

Given that you want to apply for a listing in our system. Then you would be visiting our application page [here](#) and you would fill, sign and submit the form.

1. Please write manual test cases for the page, including negative and positive cases
2. If you find a bug, please provide the structure and description of the “bug ticket” that you would create.
3. For every bug that you find please prioritize all the bugs according to severity and priority.

## Automation

### Requirements:

Framework: Cypress

Language: Typescript

### UI test cases

Please write automation test cases for some of the manual test cases defined above. You don't need to automate every test case if you feel you don't have time. The goal is to see what you can do in Cypress. Please use Typescript / Cypress.

### API test cases

Please write cypress test cases over the API for this page. To find out the API's being called, please inspect the browser. The API tests should be written in the same Cypress project using Typescript.

Submit the test cases using a git repo link.

\* The purpose of this challenge is to validate the manual and automation testing skills of the candidate.
